

“**It is not a matter of whether we are going to have a war, but when and where.**”

[illegible]

1. "The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the needs and preferences of potential customers. Once a market need is identified, the next step is to develop a concept for a product that addresses that need. This process often involves brainstorming and prototyping. The final step is to create a business plan that outlines the financial and operational aspects of the new product. This plan is used to secure funding and launch the product into the market."
